

SECTION 2

GENERAL

2.3 PERIMETER SECURITY FENCE *(rev. 8/2017)*

Airport Operations and/or Airport Police and Fire will conduct daily inspections of the perimeter security fence as required by FAA and TSA. Breaches shall be immediately reported to the airport at (907) 474-2530. When discrepancies or deficiencies are identified, Field Maintenance will be notified with specific details. Field Maintenance will be responsible for timely correction of noted problems on non leased airport land. Lessees will be responsible for deficiencies resulting from damage or modification caused by the lease. If they are unable to effect repairs in an expeditious manner, the work may be completed by the state.

At no time may the security fence or any access point be left breached and unattended. All construction projects must be secured or attended by badged personnel at all times. Airport Operations or Airport Police and Fire will inspect and approve any completed modification before the project is left unattended.

The fence consists of 8' or 12' high chain link fabric with three strands of barbed wire projecting towards the public side. All 8' high fencing is accompanied by a 6' clear zone that remains free of objects, vehicles, or debris. The fence is 12' high where objects, vehicles and debris may be within 6' of the fence.
