

intersecting highways, streams, or railroad crossings using references on the State highway map.

- (2) For projects in urban areas, identify the city and named places. Where the State highway map has an urban insert, use control points on the insert. Examples of location reporting are U.S. 310, Bridge over Potomac River, S.R. 50, 10 miles NE of Fort Lyon, E.
 - (3) For planning projects, enter the time period that the project covers from authorization date to estimated completion date, i.e., enter 10/01/2001 to 09/30/2002.
 - (4) For statewide projects indicate appropriate description, i.e., Statewide PE, Statewide Rail Crossing, and Statewide STP.
- Character of work:
 - (1) Describe briefly the work proposed.
 - (2) Include "4R" in the description of all such projects.
 - (3) Identify PE, ROW, Construction, Safety, Planning, and SPR activities.
 - (4) Indicate highway, bridge, commuter lot, or other facility.
 - (5) Identify action performed; e.g., grade, pave, drain, relocate railroad, move signals, etc.

GEOGRAPHICAL INFORMATION

11. **Demo ID** – This is a **required** 5-character alphanumeric field for demo-funded projects. The first two characters are alpha (State) and the last three characters are numeric (sequential number for the State), e.g., for Wisconsin, WI015, WI016, etc. It relates the project to a particular Demonstration Project (Demo) from a specified public law. The Demo ID's are assigned by FHWA Office of Infrastructure and identified in the allocation memo to the FHWA Division.
12. **Standard Place Code (SPC)** – This is a **required** 6-digit alphanumeric field. The codes are issued by the National Institute of Standards (NIST) for named populated places used to specifically identify the locality of the project. A listing of all standard place codes is located on the Internet at: ~~http://www.itl.nist.gov/fipspubs/55new/nav_top_fr.htm~~. Choose your State and either view or download the information. The first five digits are from the NIST list and the last character must be alpha with one of the following values that best describes the location:

See AK Codes
starting on Pg. 3

- A - Airports
- B - Post Offices Not Corresponding To Other Locational Entities
- C - Incorporated Places
- D - American Indian Areas
- E - Alaska Native Areas
- G - Non-government Facilities
- H - Counties and County Equivalents
- M - Federal Facilities
- N - State, Local and International Government Facilities
- S - Surface Transportation Facilities
- T - Active Minor Civil Division
- U - Populated (Community) Places (Except Those Associated with Facilities)
- ~~X - Obsolete or Incorrect Names or Entities~~
- ~~Z - Inactive or Nonfunctioning Primary County Division~~
- ~~NA - Not Applicable~~

Codes are for named populated places, primary county divisions (such as townships and census county divisions), American Indian and Alaska Native areas, national parks, military installations, Coast Guard bases, major airports and several kinds of other facilities. If more than one place is involved, enter the place code where the major portion of the work will be performed. If the project is in a truly rural location enter the SPC for the County in which the project is located. If a place cannot be determined or the project is Statewide, NA is the default.

LOCATION REFERENCING

Items 13 through 15 permit users to reference FMIS information to the map location of road sections. It is the same reference system used to map the location of HPMS data to road sections; consequently, these data items correspond to HPMS data items 10 through 12 as defined in the HPMS Field Manual. The Location Reference System (LRS) is typically maintained by either the State HPMS, GIS, or mapping sections.

In general, the LRS information is available on State maintained Inventory Route and Node Maps and Inventory Route Link Data Files, or their equivalents, for particular routes and sub-routes. The group having responsibility for maintaining the LRS for the State's HPMS data should be consulted for assistance in locating projects on the proper inventory route and sub route and establishing the correct milepoint coding for the LRS information required for FMIS.

1998 - FIPS 55 Codes for Named Populated Places
Primary County Divisions and Other Locational Entities
